CSE0001 – DIGITAL LITERACY

VIT Bhopal University | VITyarthi E-Learning Platform

Project Assignment Brief

PREPARED BY: AKHILESH WARIK
REGISTRATION NO. : 25BAI10078
GRADUATION YEAR : 2025-2029
COURSE : B.TECH CSE WITH SPECIALISATION IN AI AND ML
DATE : 29TH MARCH 2026

INTRODUCTION

This project focuses on understanding digital literacy and how it applies in everyday student life. Today, we rely on digital tools for learning, communication, and managing our work, so knowing how to use them properly is very important.

Through this project, I worked on different tasks like creating a digital infographic, building a student portfolio, practicing coding on online platforms, improving professional communication, and learning about cyber safety. Each task helped me explore a different side of digital skills, from creativity and technical knowledge to awareness and responsibility.

The main aim of this project was not just to complete tasks, but to understand how these skills can actually be useful in real situations. Overall, it gave me a better idea of how to use digital tools more effectively and responsibly in my academic and personal life.

Digital Literacy Awareness Infographic – Report

MODULE 1 – TASK 1

For this task, I created a digital knowledge mindfulness infographic using Canva. I decided to use Canva because it's relatively easy to work with and has a lot of ready- made templates and icons, which made designing important simpler for me. It also helped me arrange the content in a neat and visually charming way.

In the infographic, I explained what digital knowledge actually means and why it's important for scholars in moment's world. I included some generally used tools like Google Docs, Canva, and YouTube that we use in our diurnal studies. I also added a section about safe internet practices, like avoiding unknown links and keeping watchwords secure. Another part focuses on online presence and how the effects we post online can affect our future.

While making this infographic, I set up it intriguing to combine design with information. still, it wasn't always easy to keep everything short and simple while still including all the important points. Overall, this task helped me ameliorate my design chops and also gave me a better understanding of digital knowledge.

Student Digital Portfolio - Report

MODULE 2 - TASK 2

For this task, I used three platforms: GitHub, Kaggle, and LinkedIn. I mostly used GitHub to upload my projects and keep my work organized. So far, I've added a few basic projects like a calculator and a password generator. Working on these actually made it easier for me to understand how coding works in real situations, not just theory. I can also look back at my work and see my progress, which feels motivating.

On Kaggle, I've been practicing Python through small exercises. It's helpful because I can try things on my own and learn from mistakes. Sometimes it takes a few tries, but that's how I'm improving my problem-solving. LinkedIn is different—it's more about building a professional presence. I've added my education details there and started connecting with people, which I think will be useful later.

Over the next few years, I plan to keep using GitHub regularly and upload better projects as I learn more. I'll continue practicing on Kaggle to improve my skills, especially in data-related areas. On LinkedIn, I want to stay active, update my profile, and connect with more people in tech. I think these platforms will really help me grow step by step.

Explore Coding & Collaboration Platforms - Report

MODULE 3 - TASK 3 - PART A

For this part of the task, I created an account on HackerRank and explored its coding practice platform. I completed beginner-level Python challenges and also attempted the Python (Basic) certification test. While solving the problems, I got a better understanding of basic concepts like loops, conditions, and working with different data types.

At first, some questions were not very easy, and I had to try multiple times before getting the correct output. But that process actually helped me learn more, because I understood where I was making mistakes. The platform also gives instant feedback, which made it easier to improve step by step.

I also earned a Python badge and completed a few days of coding practice, which motivated me to stay consistent.

This experience will help me academically as it improves my logical thinking and coding skills. It will also be useful for future subjects, projects, and technical interviews where problem-solving is important.

Explore Coding & Collaboration Platforms - Report

MODULE 3 - TASK 3 - PART B

The form was revised to incorporate five novel inquiries concerning digital literacy, secure internet practices, and online personas. A variety of question formats were employed, including a single short-answer question, multiple-choice options, and checkboxes. The process of formulating these questions presented both challenges and intrigue, particularly in considering the most appropriate and comprehensible phrasing for a child audience.

Seeing that everything is automatically saved when I checked the response logging was a relief. It streamlines the process and helps keep everything tidy.

All in all, this exercise helped me understand how these kinds of tools could be useful for research. In the future, I think I'll be able to use Google Forms for things like quick project surveys, tests, and feedback.

Draft a Professional Email & Etiquette Guide

MODULE 4 - TASK 4 - PART B

One situation I've noticed is when students send very short or casual messages to professors or professionals without much thought. For example, messages like "Send details" or "I need help" don't really explain anything and can come across as rude, even if that wasn't the intention. Because of this, such messages are often ignored.

I think this usually happens because people don't realize how their tone sounds in text. When we talk in person, our tone and expressions help, but in messages, that context is missing.

A better way would be to write a bit more clearly and politely, like introducing yourself, explaining what you need, and ending properly. These small changes don't take much effort but can make a big difference in how the message is received.

Cybercrime Awareness Case Study & Prevention Guide

MODULE - 5 - PART A and PART B

While working on this task, what surprised me the most was how simple these scams actually are. Most of them don't involve hacking or advanced technology , but instead depend on confusing or rushing people into making mistakes. I didn't realize that something as small as accepting a UPI request without checking could lead to losing money instantly.

This made me more aware of how careful we need to be while using digital platforms daily.
One habit I will definitely change is being more mindful before clicking on links or accepting payment requests.

Earlier, I didn't always pay close attention, but now I understand how important it is to double-check everything. This task has made me more cautious and responsible while using online services.

CONCLUSION

Overall, this project was a good learning experience for me. It helped me understand that digital literacy is not just about using technology, but also about using it in a smart and responsible way. Each task taught me something different, whether it was designing, coding, communicating professionally, or staying safe online.

I also realized that small habits, like checking information properly or communicating clearly, can make a big difference. This project has made me more confident in using digital tools and more aware of how to use them carefully. I believe these skills will be helpful for my studies and future career.
